Available from April 12, 2027

Education

EPITA

Master of Engineering (M.Eng.) in Computer Science

Sep 2024 — Expected Aug 2027

Paris, FR

- **Key Academic Projects:** POSIX Shell & custom C memory allocator; multiplayer game (7 microservices, Kafka) deployed on GKE via Terraform/CI-CD.

Work Experience

Software Engineer (Apprentice)

Enedis

Oct 2024 — Present

Paris, FR

- Reduced critical vulnerabilities from 4,000+ to 20 by implementing SAST/DAST workflows in GitLab CI and collaborating with teammates to remediate findings.
- Instrumented a fleet of 14 legacy PHP apps with zero prior observability: total visits, unique visitors, per-page usage, p50/p95/p99 latency.
- Surfaced usage data showing three of these apps had far fewer users than assumed, informing decisions to retire tools whose maintenance cost outweighed their value.
- Developed a production Next.js/Node.js application from scratch while maintaining the legacy fleet.

Full-Stack Developer (Intern)

6Xpos

Jan 2024 — Mar 2024

Gap, FR

- Migrated a stats platform from Xamarin to Avalonia UI, enabling cross-platform deployment, and built a real-time IoT data consolidation engine for distributed devices.

Backend Developer (Intern)

InStore Solution

May 2023 — Jul 2023

Gap, FR

- Architected a high-concurrency SignalR/ASP.NET Core backend to synchronize game states for FDJ kiosks.

Projects

Author, kvgo - Sharded key-value store in Go (github.com/robin-vidal/kvgo)

Feb 2026 — Present

- Sustained 227k GET/s at sub-1ms p99 under 50 concurrent connections via a custom Redis-compatible (RESP2) TCP server and a sharded in-memory store with per-shard RWMutex locking.
- Achieved zero data loss across restarts via WAL with CRC32 checksums, tail truncation, and atomic file replacement.
- Designed for multi-node replication; Raft consensus (leader election, log replication) in progress.
- Exposed p50/p95/p99 latency, shard lock-wait, and hit rate via OpenTelemetry/Prometheus; CI enforces race detection.

Open Source Contributor, etcd (CNCF) - Kubernetes Key-value store (github.com/etcd-io/etcd)

May 2026 — Present

- Fixed a local build issue and improved error message clarity; pull requests merged by a CNCF maintainer.

Author, tinydocker - Container runtime in C (github.com/robin-vidal/tinydocker)

Jun 2025 — Jul 2025

- Built from scratch in C11 with Linux namespaces (UTS, PID, Mount) and chroot; no external libraries.
- Enforced per-container CPU and memory limits via cgroups v2, configurable through a CLI.

Extracurricular Activities

President of Ephemere (EPITA Photography Association)

Mar 2025 — Jun 2026

- Built and deployed an in-house automated photo workflow system (real-time capture/batch printing) used at large-scale events (+10k visitors), maintaining 97% service uptime across all events.

Skills

- **Languages:** Go, C, C++, Python, JavaScript (NodeJS)
- **Distributed Systems:** Consensus (Raft), replication, write-ahead logging, sharding, crash recovery, concurrency
- **Technologies:** Kubernetes, Docker, AWS, GKE, GitLab CI, GitHub Actions, Terraform, OpenTelemetry, Prometheus
